

Project Design Phase-II

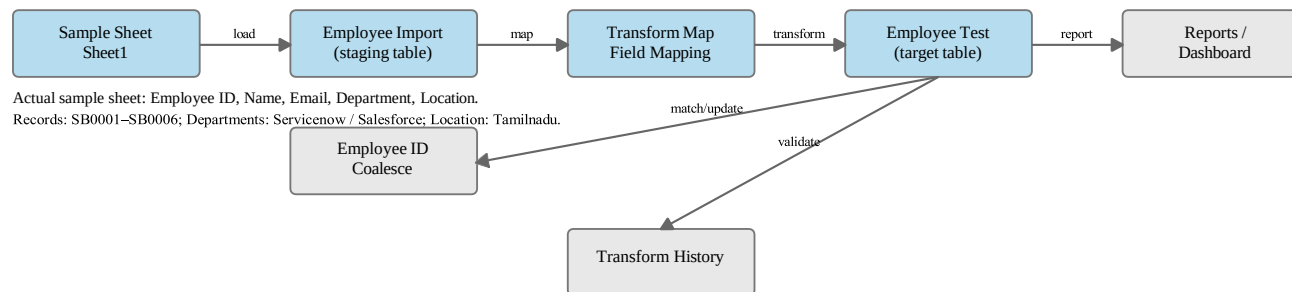

Data Flow Diagram & User Stories

Date	03-10-2026
Team ID	6ab5efedfa5e5219dc37d38c
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. It shows how data enters and leaves the system, what changes the information, and where data is stored. In this project, the supplied employee spreadsheet is loaded into an Import Set table, mapped with a Transform Map, transformed into Employee Test, validated, and used for reporting.

Example: (Simplified)

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
ServiceNow Administrator	Prepare Employee Spreadsheet	USN-1	As a ServiceNow administrator, I can use the supplied Sheet1 employee spreadsheet with Employee ID, Name, Email, Department and Location and load it into ServiceNow.	The spreadsheet contains the five documented columns and six employee records (SB0001–SB0006).	High	Phase-II
	Create Employee Test Table	USN-2	As a ServiceNow administrator, I can create the Employee Test table and add the required employee fields.	Employee Test contains Employee ID, Employee Name, Email, Department and Location.	High	Phase-II
	Create Employee Import	USN-3	As a ServiceNow administrator, I can load the employee spreadsheet and create the Employee Import table.	Employee Import is created and the spreadsheet data is staged for transformation.	High	Phase-II
	Create Transform Map	USN-4	As a ServiceNow administrator, I can create the Sample Spreadsheet Import Transform Map from Employee Import to Employee Test.	Source and target are selected and the employee fields are mapped.	High	Phase-II
	Transform Employee Data	USN-5	As a ServiceNow administrator, I can run the Transform and create employee records in Employee Test.	Transformation completes successfully and records appear in Employee Test.	High	Phase-II
ServiceNow Administrator / HR Data User	Validate Employee Records	USN-6	As a user, I can review the imported employee records and verify the transformation result.	Employee records can be reviewed in Employee Test.	High	Phase-II
ServiceNow Administrator	Enable Coalesce	USN-7	As a ServiceNow administrator, I can enable Coalesce for Employee ID so repeated imports do not create duplicate employee records.	Matching Employee IDs update existing records rather than creating duplicates.	High	Phase-II
ServiceNow Administrator / HR Data User	Import Updated / New Data	USN-8	As a user, I can import updated and new employee data through the Employee Import table.	Existing IDs are updated, new IDs are inserted, and Transform History records the result.	High	Phase-II
ServiceNow Administrator / HR Data User	Employee Reports	USN-9	As a user, I can create Employees by Department, Employees by Location, and Employee List Report.	All three reports are created from Employee Test.	Medium	Phase-II
ServiceNow Administrator / HR Data User	Employee Analytics Dashboard	USN-10	As a user, I can add the employee reports to an Employee Analytics Dashboard.	Dashboard contains the three employee reports in one view.	Medium	Phase-II
