

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	03-10-2026
Team ID	6ab5efedfa5e5219dc37d38c
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Employee Data Preparation	Prepare employee spreadsheet Use fields: Employee ID, Name, Email, Department, Location Download as Sample Spreadsheet.xlsx
FR-2	Import Set & Target Table	Create Employee Test target table (u_employee_test) Create Employee Import staging table Load spreadsheet data into the Import Set
FR-3	Transform & Validate Data	Create Sample Spreadsheet Import Transform Map Map source fields to target fields Run Transform and validate imported records
FR-4	Duplicate Control & Reporting	Enable Coalesce on Employee ID Import new and updated employee data Create department, location and employee-list reports Add reports to Employee Analytics Dashboard

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The solution provides a structured spreadsheet import process with mapped fields and centralized reports/dashboard for employee data.
NFR-2	Security	Security requirements are not explicitly specified in the project document.
NFR-3	Reliability	Data validation and Coalesce on Employee ID help maintain consistent records and avoid duplicate records during repeated imports.
NFR-4	Performance	Transform Maps automate field mapping and record transformation from the Import Set into the target table.
NFR-5	Availability	Availability requirements are not explicitly specified in the project document.
NFR-6	Scalability	Scalability requirements are not explicitly specified in the project document.
