

# Performance Testing

## Performance Test Execution & Report Submission

| Field         | Details                                        |
|---------------|------------------------------------------------|
| Date          | 03-10-2026                                     |
| Team ID       | 6ab5efedfa5e5219dc37d38c                       |
| Project Name  | Import Data using Transform Maps (Spreadsheet) |
| Maximum Marks | 4 Marks                                        |

### 1. Purpose of Document

The purpose of this document is to briefly explain the performance testing coverage and results of the Import Data using Transform Maps (Spreadsheet) project. The tests measure how quickly and reliably the solution loads spreadsheet data into the Import Set Table, transforms it into the Employee Test target table, prevents duplicate records using Coalesce, and displays the reports and dashboard.

### 2. Test Environment & Configuration

This section lists the environment and configuration used while performing the performance tests.

| Parameter        | Details                                                |
|------------------|--------------------------------------------------------|
| Platform         | ServiceNow Personal Developer Instance                 |
| Source File      | Sample Spreadsheet.xlsx (Sheet number 1, Header row 1) |
| Import Set Table | Employee Import                                        |
| Target Table     | Employee Test (u_employee_test)                        |
| Transform Map    | Sample Spreadsheet Import                              |
| Coalesce Field   | Employee ID                                            |
| Test Data Volume | 4 rows per import                                      |

### 3. Performance Test Cases

This section shows the response time of each major operation compared with the expected response time. Observed times are approximate values for the 4-row test data.

| Test Case | Operation                                            | Expected Time | Observed Time | Result |
|-----------|------------------------------------------------------|---------------|---------------|--------|
| PT-01     | Load Data – spreadsheet to Import Set Table          | Within 10 sec | Under 5 sec   | Pass   |
| PT-02     | Run Transform – first import (2 inserted, 2 updated) | Within 10 sec | Under 5 sec   | Pass   |
| PT-03     | Run Transform – same sheet re-imported               | Within 10 sec | Under 5 sec   | Pass   |
| PT-04     | Open Employee Test table list view                   | Within 3 sec  | Under 2 sec   | Pass   |
| PT-05     | Run Employees by Department report (pie chart)       | Within 5 sec  | Under 3 sec   | Pass   |
| PT-06     | Open Employee Analytics Dashboards (3 reports)       | Within 10 sec | Under 5 sec   | Pass   |

## 4. Data Processing & Coalesce Results

This section compares the records processed in each import with the expected outcome, and confirms that Coalesce prevented duplicate records.

| Import Run                      | Rows Uploaded | Inserted | Updated | Ignored |
|---------------------------------|---------------|----------|---------|---------|
| First Coalesce test             | 4             | 2        | 2       | 0       |
| Same spreadsheet uploaded again | 4             | 0        | 0       | 4       |

Both transforms completed with the state Complete and Success, and no duplicate records were created in the Employee Test table.

## 5. Performance Summary

| Section                         | Total Cases | Not Tested | Fail | Pass |
|---------------------------------|-------------|------------|------|------|
| Import & Transform Performance  | 3           | 0          | 0    | 3    |
| Table & List View Performance   | 1           | 0          | 0    | 1    |
| Reports & Dashboard Performance | 2           | 0          | 0    | 2    |

## 6. Observations

All operations completed within the expected response times. Loading and transforming the spreadsheet data was fast for the 4-row test data, and Coalesce on the Employee ID field handled the repeated import without any delay or duplicate entries. The reports and the Employee Analytics Dashboards loaded quickly.

## 7. Conclusion

The performance testing confirms that the Import Set, Transform Map, Coalesce configuration, reports and dashboard of this project respond within acceptable limits and process the imported employee data accurately and consistently.
